

The Miracle in Mortar[®]

- Plasticizer
- Performance Admixture
- Pump-Aid

Creating Workable Sol

Easy-Spred® is a proprietary formulation of specially selected natural minerals and essential components used to enhance the field performance of cement-based materials. It is a highly effective plasticizer, a performance admixture and a pump-aid. Learn how Easy-Spred® can save you time, money and effort.

MASONRY

Mortar with Easy-Spred® has exceptional workability (board-life, spreadability, flowability, adhesion and cohesion), high compressive and bond strength, less drying shrinkage, less efflorescence, and minimized segregation. Easy-Spred® is used as a plasticizer (lime alternate) with Portland cement and sand to produce mortar. The International Code Council Evaluation Service recognizes Easy-Spred® as a suitable alternate to lime in all seismic zones (ICC-ES ESR Report No. 2027). When used in place of lime, one 7-lb. bag of Easy-Spred® replaces 50-lbs. of lime. When used as a performance admixture with masonry or mortar cement and cement-lime blends, add approximately 2% Easy-Spred® by cement weight.

POOL PLASTERING

Pool plasterers use Easy-Spred® as an ingredient in their white, color and exposed aggregate mixes or as an additive with pre-blended finishes. Easy-Spred® performs many functions. It is arguably the best pump-aid in the industry, facilitates finishing of the pool because of its creaminess and reduces shrinkage cracks because of its water retention. When used in field mixed plaster, add approximately 1/4 to 1/2 of a 7-lb. bag of Easy-Spred® per 94-lb. bag of Portland cement. When used with pre-blended finishes containing aggregate, add approximately 1/2 lb. (8 – 10 fluid ounces by volume) of Easy-Spred® per 80-lb. bag of pre-blended finish.

utions Since 1960

EXTERIOR PLASTERING (STUCCO)

Easy-Spred® has numerous advantages in exterior plastering applications. Easy-Spred® improves the spreadability, flowability, pumpability, adhesion and cohesion of plaster. Because of its ability to gel and retain water, drying shrinkage is minimized. Because of its exceptional pumping characteristics, Easy-Spred® enables contractors to save money by optimizing the cement to aggregate ratio. When used with Portland cement, add from 1/2 to a full 7-lb. bag of Easy-Spred® per 94-lb. bag of cement. When used with masonry, mortar or stucco cement, add from 1/8 to 1/3 of a 7-lb. bag of Easy-Spred® per bag of cement.

PUMP-AID

Easy-Spred® is an industry-recognized pump-aid and pump primer. When hydrated, Easy-Spred® forms a gel that is a natural lubricant. The gel that Easy-Spred® produces substantially improves flowability and reduces segregation. Easy-Spred® will reduce packs and wear and tear on equipment while saving money by optimizing the cement to aggregate ratio sprayed. Add approximately 2% Easy-Spred® by cement weight when using as a pump-aid. When using Easy-Spred® to prime the pump, make a slurry by mixing 1/2 of a 7-lb. bag with five (5) gallons of water and run through hose. Slurries used to prime the pump should be discharged and not applied to the structure.

Build with...EASY-SPRED®

Join the many contractors who have used Easy-Spred® since 1960. Save time, money and effort. Use Easy-Spred® on your next project.

The Miracle in Mortar®

The Miracle in Mortar[®]

Easy-Spred[®]

- is sold worldwide
- is a code recognized plasticizer
- is a performance admixture
- is a proven pump-aid
- is non-toxic and safe to the skin
- saves time, money, space and energy with one 7-lb. bag replacing a 50-lb. bag of lime
- has been used successfully by contractors since 1960

Please visit our website www.easy-spred.com

Easy-Spred[®] is sold throughout the U.S., Canada, & overseas.
